**DEMOLITION WASTE MANAGEMENT PLAN**

All demolition projects must complete the following steps

Application Requirements

1. Complete Sections 1-3, except for "Totals" column in Section 2
2. Submit with the project application
3. Post a copy to the project site
4. Implement the plan

Final Inspection Requirements

1. Enter totals in Section 2
2. Attach recycling facility records/receipts
3. Submit with the final inspection packet

**Section 1: Contact/Project Information**

Primary Contact: \_\_\_\_\_ Email: \_\_\_\_\_  
 Project Address: \_\_\_\_\_  
 Project Description: \_\_\_\_\_

**Section 2: Project Waste Destination Plan**

Who will be disposing of the demolition waste?

- I am hiring a company to haul the materials from the site to a recycling facility
- I will haul the materials myself to a recycling facility

The following waste must be donated, reused, or recycled: concrete, asphalt, metal. All remaining materials, where possible, must be recycled, such as doors, windows, cabinets, and fixtures. Will your project be generating these materials? If so, how and where will you be disposing of the construction waste?

Material	Yes/ No*	Company hauling materials from project site	Recycling Facility <i>You will need to collect receipts from the recycling facility</i>	Totals (tons or volume) <b><i>REQUIRED: after project completion include totals below and attach receipts/records</i></b>
Concrete				
Asphalt				
Metal				
Other <i>ex: cabinetry, windows</i>				
Landfill				

\*Will this material be part of the project's waste stream?

**Section 3: Project Waste Site Plan** (see sample below)

Sketch a project waste site plan below indicating:

- Container size
- Container location on site
- Materials collected
- Location where the Demolition Waste Management Plan will be posted on site
